Rationale for presentation

- more people with interiorised stammering presenting for therapy
- interest of other SLT’s
- unique provision?
- personal interest
The City Lit

- adult education institute in central London
- national centre for work with adults who stammer
- extensive programme of intensive and non-intensive courses (23)
- approach – block modification, avoidance reduction and cognitive therapy work
Professional training courses

- Working with adults who stammer
- Vocal fold management
- Counselling skills
- Mindfulness meditation
Literature on interiorised stammering

- **Douglas and Quarrington, 1952**
  study of 20 ‘masked stutterers’

- **Kroll, 1978**
  study of 53 people who stutter

- **Levy, 1987**
  description of group therapy approach

- **Hood and Roach, 2001**
  dialogue
What is interiorised stammering?

- High levels of fluency
- High levels of avoidance
- High levels of negative emotion in relation to stammering

Term first used by Douglas and Quarrington, 1952
Benefits of non-intensive therapy

- avoidance reduction
- attitudes and feelings
- threat to identity with rapid change
Value of the group

- Same reasons apply as for why groups are valuable for many people who stammer plus……..

- Specific identity issues for people with interiorised stammering
Group constitution

- Be on time
- Make an effort to attend consistently
- Mix
- Try not to dominate
- Allow honest feedback
- No swearing
- Have some social events
Group constitution (cont’d)

- Don’t finish others’ sentences
- Be friendly and welcoming
- Work on things between sessions
- What is said in the rooms remains here – confidentiality
- Don’t speak over each other
- Respect other people
The course

- Sept 2009 – March 2010
- 25 two hour sessions
- group size – 10 (5 women and 5 men)
Identification

- ordering of covert and overt identification
- covert identification – emotions, thoughts, avoidances
- iceberg – feelings and avoidance
- cognitive therapy for thought identification
Iceberg

- Fear
- Anxiety
- Angry
- Embarrassed
- Helpless – put on spot
- Stupid
- It’s not fair
- Carrying a burden
- Depressed

- Panic
- Why me?
- Frustration
- Guilt
- Tiring
- Sad
- Tiring
- Shame
Identification cont’d

- avoidance aspects
- lifelines
- overt identification and use of video
Levels of avoidance (adapted from Sheehan, 1970)

- sound
- word
- speech
- situation
- relationships
- feelings
- role
Overt identification

- Vocabulary (stammering, fluency and non-verbal communication)
- Voice and speech production
- Use of video
- Feedback
Desensitisation

- explicit focus from session 8
- coming out
- avoidance reduction – setting aims
- avoidance – payoffs and prices
- SMART goals
- hierarchies
- voluntary stammering
Desensitisation cont’d

- self advertising
- survey
- working with negative thoughts – CBT
- mindfulness work (Kabat Zinn, 1996)
- ACT – Acceptance and Commitment Therapy (Hayes et al, 2003)

<td>Go straight to the word rather than pausing.</td>
<td>Change words less often</td>
<td>Speak more</td>
<td></td>
</tr>
<tr>
<td>S</td>
<td>Say the words rather than avoid then</td>
<td></td>
<td>Allow myself to be recorded</td>
<td>Reduce distraction strategies eg. touching hair</td>
</tr>
</tbody>
</table>
AVOIDANCE AS A WAY OF COPING - THE PAY OFFS AND THE PRICES

PAY-OFFS

Feeling the perception that you don't stammer
Less stress through not speaking up
Feeling I'm able to say something

PRICES

Not saying the words you want to say
Increased stress through searching for words you can say
Continued fear of not being able to come up
Not having your say when you have a valid point to make
Continued denial about your stammer
Not facing up to it
SMART goals

- Specific
- Measurable
- Achievable
- Relevant
- Time boundary
Voluntary stammering

- Relaxed deliberate repetitions or prolongations (slides)
- Use on non-feared words
- Way of being open about stammering
- Way of ‘coming out’
- Can ‘test’ listener reaction
- Challenging
Working with negative thoughts

- Do I need to check out the evidence?
- Do I need to decide if this thought is helpful or unhelpful?
- Do I need to consider an alternative explanation?
- Do I need to notice thinking errors e.g. mind reading, catastrophising
Mindfulness meditation (Kabat-Zinn, 1996)

- Increase non-judgemental present moment awareness
- Cultivate acceptance
- Stress management
Acceptance and commitment therapy (ACT) (Hayes et al, 2003)

- Two major goals
- Acceptance of experience which is out of personal control
- Taking committed action towards living a valued life
- Work on valued directions e.g. being an effective manager – can support avoidance reduction therapy
Desensitisation review – week 16 – video clips

- What has started to change?
- What’s helped these changes?
Modification

- work started session 17
- re-ordering of modification stages (Van Riper, 1971)
- modification issues
- risk of increasing avoidance
Evaluation

- Statements of learning

- S24 (Andrews and Cutler, 1974): results significant between t1 and t2

- Wright and Ayre Stuttering Self-rating Profile (Wright and Ayre, 2000)

</table>
2 years on – where are they now?

- S24 (mean S24 score between t1 and t2 significant; not significant between t2 and t3 probably due to small number in t3 group)
- WASSP
- questionnaire
- 50% response rate
S24 results

S24 score

- S24 score

- pre therapy
- end of therapy
- 2 years post therapy
Questionnaire results – common themes

- Benefit of meeting other people with similar stammer
- Importance of desensitisation
- Preference for pre-block and in-block modification
- Less avoidance
- More acceptance
Challenges

- 1:1 work
- getting a group together
- hidden difference
- power of avoidance
- pace of change
- lack of overt stammering
- work on psychological issues
The good news .......

- therapy can be truly liberating
- less concentration on speech techniques
- changes once made can be enduring
